

Reduction of injuries results
in the increase of profits

■ Profits
■ Injuries

STATISTICAL INFORMATION

- OSHA reports work-related injuries cost employers over \$50 billion dollars annually.
- Repetitive motion injuries are the nation's leading workplace health problem. Individual repetitive motion injury costs range between \$15,000 to \$85,000 per claim.
- Ergonomic injury prevention services can have a significant return. Studies report that some employers claim a return of 10:1 or more in costs after implementing an ergonomic injury prevention program.
- Recent figures report that for every work related injury, it takes 8-10 times the production to replace the cost of the injury.

ABOUT US

Onsite Ergonomics is a full-service ergonomics consulting firm specializing in preventing *work-related musculoskeletal injuries*. We partner together with you to keep your most important resource, your employees, healthy and productive. Our specialty is developing, implementing, and delivering an effective ergonomic injury prevention program to reduce musculoskeletal disorders (sprains and strains).

Our active, integrated approach using one-on-one consultations successfully helps our customers reduce workers' compensation injury rates. We team with you to create a successful injury prevention program with positive cost-saving results.

Onsite Ergonomics is headquartered in Northern California serving clients both regionally and nationally. The most effective way to manage workers' compensation costs is to prevent the injury before it happens.

By preventing injuries, you are protecting your most valuable assets, and your profits.
